Once you've ordered, you'll receive an email to activate your My InCharge account. Get your card or label Vattenfall just connected charging point number 15,000 to its international charging network InCharge. Vattenfall has just connected charging point number 15,000 to its growing InCharge network which offers a full range of car charging solutions at home, at work and ongoing. It is fantastic now together with our customers and partners to cross this milestone. Vattenfall launched InCharge three years ago, and we are significantly increasing our capacity in the markets, where we are present, to meet the very growing growth of electric vehicles, says Vattenfall's e-mobility business manager Tomas Björnsson. Depending on the country, Vattenfall also provides access to tens of thousands of charging points in public spaces through international roaming agreements. In the Netherlands, the number 15,000 charging point was installed, which after Norway is the fastest growing market for electric vehicles. And it's no accident to take new charging points online in the Netherlands. Vattenfall last year extended a tender contract for public charging of electric cars in Amsterdam and now operates more than 3,500 public charging points in the Dutch capital alone and nearly 5,500 public charging points entirely in the country. Enabled fossil fuel-free driving The transport sector is under great transformation. In the coming years, all major automakers will launch new all-electric and plug-in vehicles. With increasing range, lower overall cost of ownership and a strong regulatory push towards low-emission vehicles, the number of electric vehicles on the roads is expected to increase dramatically. In vattenfall's customer market alone, the number of electric cars grew by 37% from 2018 to 2019. Björnsson explains: Electric transport is one of the main focus points of Vattenfall's ambition to enable fossil fuel-free life within a generation. Imagine a world where drive, explore, explore, travel, transport goods and discover the world with your car without polluting the air, negatively affecting the climate or worrying about range limits. The infrastructure needed to enable this vision to be a reality must be implemented, and we continuously invest money and efforts to make it happen. A full range of charging products, services and beyond As a large energy company, Vattenfall can offer a full range of charging products and services to our customers such as charging stations, software, service and an impeccable billing experience. Vattenfall in the Netherlands, for example, offers a special flexpower program as a test service to owners of electric vehicles. It includes about 900 charging points that are actively routed to obtain the cheapest and fastest possible charging of our customers' electric vehicles, while supporting the electricity grid for the benefit of network operators. Björnsson adds: E-mobility is a very competitive enterprise and we need to keep our noses up and be innovative. That's why we invite companies, organizations and cities to join us as a partner to increase the number of charging points and make electric driving a natural choice through smooth charging solutions. Largest smart electric vehicle charging network optimises renewable energy use in Amsterdam Transport electrification – InCharge and other partnerships towards electric vehicle vehicles
